BENJAMIN GALÈS

Étudiant à l'école 42

Madam, Sir,

Currently undergoing training at School 42, I am seeking a new professional experience in the development sector. First, to continue challenging myself and learning in this field that fascinates me and teaches me new skills and knowledge every day. Moreover, this experience aligns with the continuation of my training at École 42: the path toward the RNCP diploma actively encourages gaining experience in a company through internships, work-study programs, or permanent contracts.

Having earned a literary baccalaureate, I extended my curiosity for words into an interest in discovering new fields. My journey may seem atypical but is nonetheless rich in learning. It enabled me to develop skills that are making me operational and especially adaptable as a developer. This ability to transition from a literary domain to a technical environment demonstrates my curiosity and my capacity to adapt to new challenges.

My experience as the website manager for Danyberd led me to start my training at school 42. By acquiring and expanding skills, I was able to apply them to real-world challenges, whether by improving customer experience or customizing the front end and UI.

After completing what we call "common core" at school 42, I searched for a first professional opportunity and found it at Ansys, where I worked as a full-stack developer. I learned a great deal, both technically and in terms of team and projects organization. Most importantly, I reinforced my motivation and passion for software development.

I am convinced that my profile can bring a unique perspective to your team, whether due to my adaptability, curiosity, or desire to improve. I am looking forward to take on the challenges your company has to offer, which would not only help me to improve my current skills but will also make me develop new ones. I would be delighted to discuss my application in more detail during an interview.

Awaiting your response, please accept the expression of my distinguished regards.
